

## Depleted Uranium Making All Wars Nuclear

### The White Horse Serves Genocide to Its Soldiers...and the World

*"For then shall be great tribulation, such as was not since the beginning of the world to this time, no, nor ever shall be. And except those days should be shortened, there shall NO flesh be saved..."*

- **Mattithyah 24:21-22**

No one with any brains should ever consider enlisting in the U.S. armed forces because the people in charge of America's defenses have clearly demonstrated they have absolutely no regard for the health and welfare of their troops. A study of the irresponsible and continuing use of depleted uranium ammunition proves this beyond a shadow of a doubt.

For the past decade, America's leaders have fought to prevent depleted uranium (DU) ammunition from being declared a Weapon of Mass Destruction by the United Nations, despite knowing that exposure to this poisonous substance guarantees cancer, birth defects and a host of other lethal health hazards. Despite tens of thousands of Gulf War veterans in bad health that many blame on DU and many veterans of the conflict in Yugoslavia now urinating uranium, the politicians and generals have refused to ban this deadly substance because it is simply too effective a weapon. And they continue to deny appropriate health care to U.S. military veterans who are suffering because of it.

*"Never in my wildest dreams did I think that the United States would be detonating nuclear shells to poison its own soldiers and the surrounding civilian populations with radioactive isotopes!"*

- **Dr. Helen Caldicott, Metal of Dishonor**

**Don't be misled by the term 'depleted uranium'.** Uranium 238 makes up over 99% of the content of both natural uranium and depleted uranium. Depleted uranium is roughly 60% as radioactive as naturally occurring uranium, with a half life of 4.5 billion years.

Now a new invasion is set to unfold in the one place in the world where depleted uranium contamination is worst — southern Iraq. American soldiers will be sent into battle with inadequate protections against a proven health hazard that will almost certainly doom them to lives diminished by a variety of cancers caused by uranium 238, which means they may transmit these illnesses to their family and friends — and birth defects to their children — when and if they return home.

In recent days, an evocative fourplex of stories has been posted on the [www.rense.com](http://www.rense.com) website that vividly portrays the danger and depravity of the depleted uranium issue. In addition, the web is full of stories about the dangers of depleted uranium and the coverup of those dangers by U.S. authorities. When you read them, it will become clear that American officials are far more interested in taking lives than saving them. They are jeopardizing the lives and futures of all personnel now serving in the U.S. military.

### Warning – Do Not Use Depleted Uranium Munitions Again!

By Dr. Doug Rokke  
Former U.S. Army's  
DU Project Director

Dr. Doug Rokke is the man the U.S. government put in charge of trying to clean up and assess certain aspects of contamination after the first Gulf War. When he finally reached his conclusions, the Army ignored them, hid his medical records from him, and insisted he didn't get sick as a result of his work. A later examination revealed Rokke had 5000 times the normal amount of radiation in his body.

Rokke ran the U.S. Army's depleted uranium project in the mid-90s, and he was in charge of the Army's effort to clean up DU after the Persian Gulf War. He also directed the Edwin R. Bradley Radiological Laboratories at Fort McClellan, Ala. What Rokke found after the Persian Gulf massacre terrified him. "'Oh my God' is the only way to describe it," Rokke said....

**"Contamination was all over!"**

Rokke and his crew were measuring significant levels of radiation up to 50 meters away from affected tanks: up to 300 millirems an hour in beta and gamma radiation, and alpha radiation from the thousands to the millions in counts per minute (CPM) on a Geiger counter. **"That whole area is still trashed," he said. "It's hotter than heck over there still. This stuff doesn't go away."**

This is the situation all U.S. troops face the White Horse masses American troops for more invasions in the Middle East. This attack having even less moral justification than the first Gulf War in 1990. Rokke's team took three months to clean up 24 tanks for transport back to the U.S. The Army, Rokke said, took another three years to fully decontaminate the same 24 tanks. But the contaminated tanks weren't the only problem. Within 72 hours of their inspections, Rokke and his crew started getting sick. In the past decade, Rokke said 80 men out of 100 who were closely involved in these operations...

#### **dropped dead.**

Rokke's lungs and kidneys are damaged. He believes that uranium oxide dust is permanently trapped inside his lungs. He has lesions on his brain, pustules on his skin. He suffers from chronic fatigue syndrome. He has reactive airway disease, which means he can't stop wheezing and coughing, and experiences a loss of breath when he exercises. He also has fibromyalgia, a condition that causes chronic pain in his muscles, ligaments and tendons.

The VA tested Rokke for uranium levels in his body in 1994. He got the results back two and a half years later. His urine had 5000 times the amount of permissible uranium. After years of fighting with the VA, Rokke said he managed to get a 40 percent disability, but there is no official acknowledgement that his illnesses were caused by his work with DU.

Despite overwhelming evidence to the contrary, the Army and the Pentagon continue to insist that DU is safe. U.S. authorities continue to cover up the DU scandal for two reasons: first, because DU coated shells are far more powerful than ordinary ordnance, and second, because the policy of making DU weaponry provides the beleaguered U.S. nuclear industry with a handy and lucrative way for armament manufacturers to "dispose" of a waste material.

The problem with DU, Rokke points out, is the dust that's given off when a round is fired. The projectile begins burning immediately (pyrophorocity), and up to 70 percent of it oxidizes into a heavy metal radio-active dust.

*When a DU shell hits its target, it burns, losing anywhere from 40 to 70 percent of its mass and dispersing a fine dust that can be carried world-wide by winds and absorbed directly into the soil and groundwater.*

**"This aerosolized powder — uranium oxide — is the really dangerous stuff, particularly when it is inhaled."- Rokke said.**

*"We came across a lot of destroyed vehicles and dead bodies as we moved up through Kuwait. Nobody ever told us to stay away from the vehicles that might have been contaminated with depleted uranium."*

- **Victor Suell, radio operator, US Marines**

**Dr. Helen Caldicott**, probably the world's foremost critic of nuclear power, agrees: "...depleted uranium spontaneously burns on impact, creating tiny aerosolized particles less than five microns in diameter, small enough to be inhaled. At least seventy percent of the uranium in these weapons is released in this form on impact, and these tiny particles travel long distances when airborne."

### GULF WAR ILLNESS/SYNDROME

About one quarter of the 700,000 troops sent to the Persian Gulf War have reported some sort of Gulf War-related illness, and Rokke is convinced that DU has something to do with it, along with the host of other chemicals to which troops were exposed, including low levels of sarin gas, smoke from oil fires, countless pesticides as well as anti-nerve gas tablets which troops were required to ingest.

**Rokke:** "Today, at least one decade after thousands and maybe millions of individuals were exposed to DU contamination and who should have received medical care per our original 1991 recommendations and as specified in the October 14, 1993 directive, less than 500 individuals have ever been provided the required radio-bioassay testing and consequent medical care. We must note that if United States personnel should receive medical care then all exposed individuals also must receive medical care."

Just imagine the top brass in Washington actually caring about what their Dr. Strangelove contraptions have done to the million or so sick people in the Persian Gulf. But the problem is not just in faraway Iraq. Similar health effects also have been documented in uranium processing facility employees of and residents living near Paducah, Kentucky; Portsmouth, Ohio; Los Alamos, New Mexico; Oak Ridge, Tennessee; and Hanford, Washington, where the DU weaponry was made. Employees at uranium manufacturing or processing facilities in New York, Tennessee, Iowa, Massachusetts, and the four corners area of southwest Colorado also have repeatedly reported health effects similar to those reported by verified Gulf War DU casualties. Iraqi and other humanitarian agency

physicians are reporting the same health effects in exposed populations. Scottish scientists recently verified that residents of the Balkans were excreting uranium in their urine. When US troops or Iraqis breathe even a tiny amount into their lungs, as little as one gram, it is the same as getting an X-Ray every hour for the rest of their shortened life. The depleted uranium cannot be removed, there is no treatment, there is NO CURE. This radioactive dust will long outlast the veterans' and the Iraqis' bodies though; for, you see, it lasts virtually forever.

## 250,000 NAGASAKI BOMBS!

A Navy Admiral in India calculated the amount of radiation in the Nagasaki bomb and compared it with the number in the 4 million pounds of depleted uranium left in Iraq by US forces from the 2003 Iraq invasion.

How many Nagasaki bombs equal the radiation in the 2003 Iraq war? Answer: about 250,000 Nagasaki bombs! The American military knew the symptoms of radiation poisoning back in 1943, but remain quiet about this silent genocide upon US troops and innocent children through out Afghanistan, Iraq, the Middle East, and the world!

*"They shall be devoured with burning heat... Bitter destruction with the radio-active heat of the serpents of the (DU) dust"-Deut.32:24*

Apart from DU, Rokke listed other hazards facing America's military personnel.

"Today, we know that the anthrax manufacturing process was never inspected and approved by the FDA before 1993 and today the FDA still has not approved the facility. We also know that there are adverse short term and probably long-term effects. The anthrax vaccine that we administered was licensed for prevention of cutaneous and not respiratory anthrax. Then just within the last month, Department of Defense officials finally admitted after continued denials that an illegal adjuvant, squalene was used instead of alum in some vaccine batches. Consequently, we probably reduced the ability of the immune system to fight off the multitude of exposures that occurred.

"Troops were also immunized against a whole host of diseases and biological warfare toxins such as anthrax and botulism. If immunizations had been maintained rather than giving individuals 4 or 5 and more simultaneous immunizations, we could have reduced adverse effects on the immune system. The US military gave individuals numerous shots at the same time and, then, did not keep

track of what was given or what adverse reactions took place. We messed up immune systems before deployment. Basically, after we declared war we had to immunize everyone. As I administered hundreds of anthrax and botulinum shots in Saudi Arabia, I could only wonder why we were ordered not to record any information. Once more, our actions to protect individuals against a verified threat ignored common sense."

This is the way America's military leaders protect the welfare of their troops. And there's more....

**Rokke:** "The confirmed nerve agent threat resulted in the use of PB (pyridostigmine bromide / mestinon), which is actually a reversible bond nerve agent, in an attempt to reduce the effects of chemical warfare nerve agents such as Sarin, VX, Soman, Novachuks, and Multiple 7. PB can be compared to spraying gumdrops with Raid or Black Flag and then eating them. We expected adverse reactions from consumption of PB because it is a carbamate pesticide compound. Therefore, we made sure that NBC operations and medical personnel knew of potential adverse effects.

"Again, we knew there would be health effects and yet commanders decided to ignore our warnings and force individuals to eat PB tablets. As part of our discussions we also identified and warned about the anticipated interactions between pesticides, nerve agents, and drugs such as PB. Official Department of Army medical records confirm that over 50 % of the individuals who took the PB got sick with nerve agent effects. American officials ignored and continue to ignore ALL these problems.

"Today, many of us; including scientists, physicians, pastors, and others; who decided to speak up about what occurred, why it occurred, what should have been done years ago, and what should be done now have lost jobs, experienced retaliation, and been threatened by Department of Defense, Department of the Army, and Department of Veterans Affairs officials. The direct and indirect threats, warnings, and attacks also have been directed to our family members to bring pressure on us to stop demanding accountability. This is all about liability! Therefore the truth must be suppressed! If these crimes are acknowledged, then specific individuals within the US government and other governments will be required to accept responsibility for the consequences & treason

## BIRTH DEFECTS, CANCER & DEATH

*"In Iraq in 1997, I discovered monstrous births of deformed babies, and old men, who, amid the wreckage which the Allies had blasted with our uranium shells, told me of daughters with breast and liver cancer and leukemia." -- Robert Fisk*

Since 1991, I have been constantly warned about the danger of Depleted Uranium for the civilian population [of Iraq]. Many of the DU projectiles spread over the battlefields have been collected by children and were used as toys with possibly devastating consequences.

The rate of birth defects, after increasing ten-fold from 11 per 100,000 births in 1989 to 116 per 100,000 in 2001, *is soaring further.* Dr. Nawar Ali, a medical researcher into birth deformities at Baghdad University, told the UN's Integrated Regional Information Networks (IRIN) last month: "There have been 650 cases [birth deformities] in total since August 2003 reported in government hospitals."

I thought I had a strong stomach – toughened by the minefields and foul frontline hospitals of Angola, by the handiwork of the death squads in Haiti and by the wholesale butchery of Rwanda. But I nearly lost my breakfast last week at the Basrah Maternity and Children's Hospital in southern Iraq. I left the ward, leaned against a wall and prayed for the ground to open and swallow me up. For the people of Iraq, for the children of

Iraq, due to the radiation, the war will never end. There is no escape into normality and as we threaten to bomb again, and again, there is no hiding place for any of us!

**"This is worse than war!"  
a doctor told me (Rokke) in 1992.**

*Birth deformities afflicting  
Children of US Troops too!*

## The War that keeps on Killing American Babies

"Sixty-seven percent of babies born to the 400,000 vets who suffer from Gulf War Syndrome have birth defects," said Joyce Riley, a former nurse who flew in Iraq and the founder and spokesperson of the American Gulf War

Veterans Association. *"But the Department of Defense & Veterans Affairs do not want America to know the number of sick, dead and deformed kids that vets are having. It's another cover-up!"*([www.thepowerhour.com](http://www.thepowerhour.com))

In addition to its ability to fuse and scramble the DNA code, uranium is chemically toxic, like lead, and can damage the kidneys and lungs. Perhaps, the fatal epidemic of swollen abdomens among Iraqi children is caused by kidney failure resulting from uranium poisoning.

*"Iraq holds the United States and Britain legally and morally responsible for the grave health and environmental impact of the use of DU ..."*

(A version of the report is available at:  
[www.iacenter.org/depleted/du\\_iraq.htm](http://www.iacenter.org/depleted/du_iraq.htm)).

## THE NIGHTMARE OF THE WHITE HORSE! European Union Votes for DU Ban

The European Parliament has called for a ban on the use of depleted uranium (DU). – **BBC News, 1/17/0**

A majority of international experts agrees that DU is already a banned weapon because it is incompatible with existing humanitarian law and qualifies as a weapon of mass destruction. In 1996 this issue was brought before the Human Rights Tribunal in Geneva and the Tribunal condemned it as warfare. They actually called depleted uranium a WMD or weapon of mass destruction, one that destroys the user as well as the used.

*"Military men are just dumb stupid animals to be used as pawns in foreign policy."*  
– Henry Kissinger said of US troops

**President George W. Bush (Rider of the White Horse)** promised to invade and attack many more countries in his 2003 State of the Union speech. But Washington's top brass continue to say your soldiers your children, or husbands and wives are perfectly safe... **YHWH Save Us!**
